Patent No. 5892012
SEQUENCE CHARACTERISTICS:
LENGTH: 1340 base pairs
TYPE: nucleic acid
STRANDEDNESS: single
TOPOLOGY: linear
IMMEDIATE SOURCE:
LIBRARY: PANCNOTO4
CLONE: 738957

Patent No. US20020146758A1
GENERAL INFORMATION:
GENERAL INFORMATION:
TITLE OF INVENTION: ISOLATED HUMAN RAS-LIKE PROTEINS,
TITLE OF INVENTION: NUCLEIC ACID MOLECULES ENCODING THESE HUMAN RAS-LIKE
FILE REFERENCE: CL001188
CURRENT APPLICATION NUMBER: US/09/817,198A
CURRENT FILING DATE: 2001-03-27
NUMBER OF SEQ ID NOS: 33
SOFTWARE: FastSEQ for Windows Version 4.0
                                                                                                                                                                                                                                                                                                                                                                                                                                              1 TGCCCGCTGCCCGCCCGCCAGTTCCCGGCCCCGCTGGCCCCAGTCATGGCGAAGCAGTACG

Patent No. US20020146758A1

GENERAL INFORMATION:
APPLICAMY: YE. Jane et al.
TITLE OF INVENTION: ISOLATED HUMAN RAS-LIKE PROTEINS,
TITLE OF INVENTION: NUCLEIC ACID MOLECULES ENCODING THE
TITLE OF INVENTION: PROTEINS, AND USES THEREOF
FILE REPERRACE: CLOO1188

CURRENT APPLICATION NUMBER: US/09/817,198A

CURRENT PILING DATE: 2001-03-27

NUMBER OF SEQ ID NOS: 33

SOFTWARE: FastSEQ for Windows Version 4.0

Novel polypeptides useful for diagnosing, treating, preventing and/or prognosing disorders related to the proteins, including cancers, immune disorders and neuronal disorders

Claim 1; SEQ ID No 701; 880pp; English

```
The invention relates to novel isolated polypeptides (I), and the antibody to (I) are useful for diagnosing, preventing and treating diseases including immune system disorders (e.g. congenital and acquired immunodeficiencies, autoimmune clasorders (e.g. congenital and acquired immunodeficiencies, autoimmune trapletions and graft versus host diseases. Infectious diseases (e.g. rheading disorders, inflammatory conditions, organ transplant rejections and graft versus host disease, infectious diseases (e.g. hepatitis C), bleeding disorders, clasorders, inflammatities and other blood-related disorders (sickle cell anaemia), myeloproliferative disorders (e.g. Alzhelmer's disease, Parkinson's disease), chromosomal abnormalities (Down syndrome), ischaemic injury (e.g. stroke), renal abnormalities (long glomerulonephritis), cardiovascular disorders (e.g. arrhythmia), respiratory disorders, dermatological disorders, in wound healing, epithelial cell proliferation, endocrine disorders, in wound healing, epithelial cell proliferation, endocrine disorders (inflammatory disorders), liver disorders (cirrhosis), as stimulators of B-cell responsiveness to pathogens, activators of tumour proliferation in pathologies e.g. acquired immune deficiency syndrome (AIDS). AAU17683 represent novel signal transduction gathway protein, amino acid sequences of the invention.

AAC7446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, which represent the human ORFX open reading frames 1 to 3161. The ORFX sequences have activities such as: cytostatic; hepatotropic; vulnerary; antiparkinsonian; nootropic; neuroprotective; categoralic; anticonvulsant; antiarthritic; immunosuppressant; immunostimilant; cardiant; thrombolytic; coaquiant; vasotropic; antidiabetic; hypotensive; dermatological; immunosuppressive; categoralic and antianaemic. The sequences can be used for determining pathological conditions associated with an ORFX-associated disorder. The nucleic acids may be used to treat cancers, proliferative disorders, onlocated acids may be used to treat cancers, proliferative disorders, neurodegenerative disorders, osteoarthritis, graft vs host disease, cardiovascular disease, diabetes mellitus, dypertension, hypothyroidism, cholesterol ester storage, systemic lupus allocatic and antiderial or fungal infection, malaria, autoimmune disorders, asthma, allocated and antiderial or fungal infection, malaria, autoimmune disorders, asthma, allocated antiderial or fungal infection, malaria, autoimmune disorders, asthma, allocated antiderial or fungal infection, malaria, autoimmune disorders, asthma, allocated antiderial or fungal infection, malaria, autoimmune disorders, asthma, allocated antiderial or fungal infection, malaria, autoimmune disorders, asthma, allocated antiderial or fungal infection, malaria, autoimmune disorders, asthma, allocated antiderial or fungal infections and antiderial or fungal infectio
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               61 IWDTAGQERYQTITKQYYRRAQGIFLVYDISSERSYQHIMKWVSDVDEYAPEGVQKILIG 120

New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                            Drosophila; developmental biology; cell signalling; insecticide;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Disclosure; SEQ ID NO 38802; 21pp + Sequence Listing; English.

Sequences ABA08225-ABA09574 represent 1330 NOVEL IMMUSE PLILLES, and sequences ABA08225-ABA09574 represent nucleic acids encoding them. The invention also relates to vectors and recombinant host cells comprising a nucleotide of the invention, methods of producing the novel polypeptides, antibodies against the polypeptides, methods of detecting the nucleotides of polypeptides in a sample, and methods of identifying compounds which is polypeptides of the invention. Although novel, many of the polypeptides of the invention have homology to known proteins, thereby giving an insight into their probable biological activities, and hence of potential therapeutic applications. The polypeptides of the invention may have various activities; stem cell growth factor activity; have various activities; stem cell growth factor activities; immunomodulatory activity; tissue growth activity; chambotic or chemotractic or chemokinetic activities; haemostatic, thrombotic or thrombotylic activities; receptor or ligand activities; or may be invention are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Such conditions and arthritis), conditions, e.g., by protein or gene therapy. Such conditions arthritis), and activities of disorders, charactery dispared activities or arthritis), and acceptance or lymphoid cell conditions, e.g., appropriations arthritis), and acceptance or lymphoid cell conditions arthritis), and activities or arthritis). З Sequences ABB10981-ABB12330 represent 1350 novel human polypeptides, and proliferative retinopathy, atheroscierosis, coronary heart disease, arterial ischaemia, bone disorders (e.g., osteoporosis), and abnormal vascular growth. Polypeptides involved with tissue regeneration and repair (or nucleic acids encoding them) may be used to promote wound healing (e.g., of burns, incisions and ulcers), while those with immunomodulatory activities may be used in the treatment of viral, bacterial and fungal infections in addition to immune disorders.

Polypeptides with growth factor activity may be used in cell cultures

```
ö
promote cell growth. For example, such polypeptides may be used to manipulate stem cells in culture to give rise to neuroepithelial cells that can be used to augment or replace cells damaged by illness, autoimmune disease or accidental damage. The polypeptides and nucleotides may also be used in the diagnosis of the above conditions, and in drug screening techniques. The present sequence represents a novel human polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                         61 IWDTAGQERYQTITKQYYRRAQGIFLVYDISSERSYQHIMKWVSDVDEYAPEGVQKILIG 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     셤
                                                   The invention relates to 2175 novel human ovarian antigens (ABP41054-ABP43228) and to cDNAs encoding them (ABQ54131-ABQ56305), and also encompasses polypeptides 90% identical and polypuclectides 95% identical to the sequences of the invention. The invention additionally relates to recombinant vectors and host cells comprising human ovarian antigen and the use of ovarian antigen polymuclectides and polypeptides in diagnosing, treating, prognosing or preventing various ovary and/or breast related of sorders. Succeeditions include ovarian cancer and breast cancer, and castatic tumours of ovarian or breast origin, reproductive system of disorders (e.g., infertility, disorders of pregancy, anovulation, disorders (e.g., infertility, disorders of pregancy, anovulation, disorders, infertility, disorders of pregancy, anovulation, disorders, infertility, disorders of pregancy, anovulation, disorders, infertility, disorders or pregancy, anovulation, disorders, autoimmune opportitions (e.g., mastitis, oophoritis and immunodeficiencies, autoimmune opportitis, systemic lupus erythematosus), condurated disorders (e.g., anaemia), cardiovascular disorders and unimary system disorders. Ovarian antigen polypeptides and complete ovarian antigen expression or activity. The polynucleotides may also be used in screening for compounds which modulate ovarian antigen expression or activity. The polynucleotides may be used as food additives or to prepare antibodies of dentification of individuals and in forensic analysis, and the printed sequence represents a human ovarian antigen of the invention.

Note: The sequence data for this patent did not form part of the printed of the printe

polynucleotide sequences AAF17982 - AAF18424 encode human lung cancer associated proteins represented in AAB58106 - AAB5848. Lung cancer associated proteins and polynucleotide sequences, their agonists, and antagonists may have neuroprotective; expostatic; cardioactive; antagonists may have neuroprotective; cytostatic; cardioactive; antagonists may have neuroprotective; cytostatic; cardioactive; antagonists may have neuroprotective; general; vulnerary; gastrointestinal general; nephrotropic; antiinfective; gynecological; or mathacterial activity. The invention also includes antibodies specific for the protein or polynucleotide sequences. The lung cancer associated opolynucleotide sequences may be used for detection of lung cancer, chromosome identification, as chromosome markers, and for numerous other diagnostic or research purposes. The proteins may be used to treat diagnostic or research purposes. The proteins may be used in the treatment of wounds and charcterial pulmonary, cardiovascular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal, and proliferative discorders. The proteins may also be used in the treatment of wounds and ceptide AAB58849 are used in the course of the luvention for the identification and characterisation of the polynucleotide and protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   NKADEEQKROVGREQGQQLAKEYGMDFYETSACTNLNIKESFTRLTELVLQAHRKELEGL 180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          RESULT 8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAB19165
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AXXXEX
```

œ

```
coded by said sequence belongs to Yap/Rab family and is the homolog of mouse Rabio. The present invention also relates to the polypeptide coded by said nucleotide sequence and the application and preparing process of said polynucleotide and said polypeptide. This sequence represents the human Rabio protein described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    60 QIWDTAGQERYQTITKQYYRRAQGIFLVYDISSERSYQHIMKWVSDVDEYAPEGVQKILI 119

RAB proteins constitute the largest family of small Grpases, with over 40 identified isoforms. RAB proteins contain four highly conserved peptide sequences involved in GTP binding and hydrolysis. Compositions comprising RAB nucleic acid are useful for identifying homologous or related genes, in producing compositions that modulate the expression or function of RAB, for gene therapy, mapping functional regions of the protein and in studying associated physiological pathways. In addition, modulation of the gene activity in vivo is used for prophylactic and therapeutic purposes, such as treatment of cancer, and identification of cell type based on expression and many also be used to identify expression of
                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel isolated nucleic acid encoding a mammalian RAB protein useful for identifying homologous or related genes, in producing composition that modulates expression or function of RAB for cancer therapy

The present invention describes primer sets for synthesising 5602 [ull-length cDNAs defined in the specification. Where a primer set comprises: (a) an oilgo-dT primer and an oilgouncleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide comprises at least 15 nucleotides; or (b) a combination of an oilgonucleotide comprises a least 15 nucleotides; or (b) a combination of an oilgonucleotide comprises a sequence complementary to the compress and an oilgonucleotide comprises a 5'-end sequence and an oilgonucleotide comprises a 5'-end sequence complementary to a polynucleotide which comprises a 3'-end sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the oilgonucleotide which comprises a 3'-end sequence, where the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the full-length cDNAs. The primers are also useful for the full-length cDNAs. The primers are also useful for the full-length cDNAs and primers allow obtaining of the full-length cDNAs are primers allow obtaining of the full-length cDNAs represent human cDNA sequences; AAH13628 and AAH13633 represent human amino acid sequences; and AAH13632 to AAH13632 represent human anino acid sequences; and AAH13632 to AAH13632 represent continue and which are used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; prostate cancer; prostate cancer antigen; detection; diagnosis; neuroprotective; cytostatic; cardioactive; immunomodulatory; muscular; vulnerary; gastrointestinal; nephrotropic; antiinfective; gynaecological; antibacterial; gene therapy; neural; immune; reproductive; renal; gastrointestinal; pulmonary; cardiovascular; proliferative disorder; wound; infectious disease.

                                                                                                                                                                                                                                                                                                                                                                     AAF15566 to AAF16505 encode the human prostate cancer associated proteins, called prostate cancer antigens, given in AAB56363 to AAB57302. The prostate cancer antigens can have neuroprotective, cytostatic, cardioactive, immunomodulatory, muscular, vulnerary, gastrointestinal, nephrotropic, antiinfective, gynaecological and antibacterial activities, and can be used in gene therapy. The prostate cancer antigen polynucleotides may be used for detection of prostate cancer, chromosome identification, as chromosome markers, and for numerous other diagnostic or research purposes. The prostate cancer antigens may be used to treat glassides such as neural, immune, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal, and proliferative disorders, wounds, and infectious diseases.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            g
                                                                                                                                                                                                                                                                       The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PER) primers, oligomers; and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in clasponstics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and and continuous and sequences as ABG00010-ABG30377 represent novel human classequences are supplication, but was obtained in electronic format directly from WIPO at the sequence at this patent did not appear in the printed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        QIWDTAGQERYQTITKQYYRRAQGIFLVYDISSERSYQHIMKWVSDVDEYAPEGVQKILI 119

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1 MAKQYDVLFRLLLIGDSGVGKTCLLCRFTDNEFHSSHISTIGVDFKMKTIEVDGIKVRIQ 60
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIG176-ABL30311), expressed DNA sequences (ABLIG176-ABL30311), expressed DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human, G-protein, 32705, 23224, 27423, 32700, 32712, lung disorder, congenital anomaly, pulmonary congestion, oedema; haemorrhage,

The present sequence represents a human G-protein. The specification describes 3705, 2324, 27423, 32700 or 32712 small G-proteins. The G-protein polypeptides and polynucleotides are useful as a target for diagnosis and treatment of G-protein mediated or related disorders, and for identifying agonists and antagonists for diagnosis and treatment. They are useful for treating disorders of lung (e.g. congenital anomalies, pulmonary congestion, oedema, adult respiratory distress syndrome, haemorrhage, chronic obstructive pulmonary disease, asthma, Goodpasture's syndrome and pulmonary hypertension), liver (e.g. hepatic injury, jaundice, cholestasis, viral hepatitis, cirrhosis, Wilson's disease, autoimmune hepatitis and hepatic failure), and corpus and siscered is chemical ischemia, intracranial haemorrhage, acute meningitis, Parkinson's disease, Alzheimer's disease, gliomas, chronic paterial meningencephalitis, multiple sclerosis, amyotropic lateral
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         61 IWDTAGQERYQTITKQYYRRAQGIFLVYDISSERSYQHIMKWVSDVDEYAPEGVQKILIG 120

The present invention describes primer sets for synthesising 5602
full-length cDNAs defined in the specification. Where a primer set
comprises: (a) an oilgo-dr primer and an oilgonucleotide comprises one of
the complementary strand of a polynucleotide which comprises one of
cligonucleotide comprises at least 15 nucleotides; or (b) a combination
of an oilgonucleotide comprising a sequence complementary to the
complementary strand of a polynucleotide which comprises a 5'-end
complementary strand of a polynucleotide which comprises a 5'-end
complementary strand of a polynucleotide which comprises a 5'-end
complementary strand of a polynucleotide which comprises a 5'-end
complementary strand of a polynucleotide complementary to the
complementary strand of a polynucleotide comprises a 5'-end
complementary strand of a polynucleotide and the combination of
complementary strand of a polynucleotide and the combination of
complementary strand of a polynucleotides and the combination of
complementary strand of sequence is selected from those defined in
the 5'-end sequence 3'-end sequence is selected from those defined in
the 5'-end sequence 3'-end sequence is selected from those defined in
the principle comprises are also useful for the
complementary full-length cDNAs. The primers are also useful for the
complementary without any specialised methods. AAH03166 to AAH13628 and
AAH13633 to AAH13634 represent human cDNA sequences; and AAH13629 to AAH13632
crepresent oilgonucleotides, all of which are used in the exemplification
complementary invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            61 IWDTAGQERFRITTAYYRGAMGIMLVYDITNERSFDNIKNWIRNIEBHASSDVERMILG 120

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
